

The noncommutative Gurarij space and other Fraïssé limits in functional analysis

October 28th, 2014
Model Theory Seminar
(McMaster University)

I will explain how some important objects in functional analysis can be realized as Fraïssé limits. This is achieved in the framework of Fraïssé theory for metric structures developed by Ben Yaacov. This point of view can then be used to shed new light on these objects and their automorphism groups.
